New Tools for Accessing ACS Data

In this workshop, participants will learn how to access American Community Survey (ACS) data using two tools: the new data.census.gov platform and the Census Bureau's Application Programming Interface (API). In the first half of the workshop, **KaNin Reese, Chief of the Dissemination Outreach Branch in the Center for Enterprise Dissemination at the Census Bureau** will provide an overview of data.census.gov, which is replacing American FactFinder. Participants will learn how to use the system to query data for specific subjects or tables and how to use advanced query features to extract data for multiple geographies. In the second half of the workshop, **R. Chase Sawyer, Supervisory Survey Statistician in the Outreach and Education Branch of the American Community Survey Office** will explain how to access the API, how to identify ACS variables and geographies to build queries, and where to find additional resources.

In addition to the tutorials, participants will have time to work through hands-on exercises—both on data.census.gov and the API—with support from Census Bureau technical experts. **Participants should bring a laptop or tablet to participate in the hands-on portion of the workshop**

The State of the States: Population Projections in the 21st Century

Presider: Beth Jarosz, Population Reference Bureau

Population projections remain one of the most requested items of applied demographers. People want to know what the future will look like given current demographic trends. At the state level, population projections are often requested to plan for roads, schools and water supplies, among other things. Businesses and nonprofits also use population projections for their own planning purposes. Most states established programs to prepare state and local population estimates and projections – many established during the 1960s and 1970s during an era of regionalization and a need to standardize methods and assumptions for forecasting future populations. Methods developed during the Twentieth Century remain the standard – with occasional refinements. The purpose of this session is to understand the historical development of state population projection programs; the current status of these programs – including the methods and assumptions of current population projection models of various states and nationally; how demographers are handling current “known unknowns” such as climate change, changing fertility and life expectancy; and to discuss challenges ahead for projecting populations for states and local areas in the 21st Century, such as potential undercounts from Census 2020, changes to race/ethnic reporting, and reporting results in the age of “Fake News.”

The discussion will include:

1. Historical development of state population projection programs – (how/why did states start producing population projections; how program development varied by state and challenges of state government agency vs. university based programs; how well have we predicted the future?)
2. Current state of population projections (methods utilized; component assumptions; innovations in population projection methods)
3. Projecting known unknowns (how to account for economic booms & busts, changes in life expectancy and fertility; sea level rise)
4. Future challenges to state population projection programs (doing more with less; change in race/ethnic definitions; impacts of Census 2020?; reporting results in the age of the “Death of Expertise” and “Fake News”)

Presider: Beth Jarosz, Senior Research Associate, Population Reference Bureau, US Programs

Panelists: Qian Cai, Director, Demographics Research Group, Weldon Cooper Center for Public Service
Xiuhong “Helen” You, Senior Demographer, Texas Demographic Center, University of Texas at San Antonio

2020 and Beyond: Key Developments and New Initiatives at the U.S. Census Bureau

Victoria Velkoff
SDA Plenary Speaker 2019

Dr. Victoria (Tori) Velkoff has spent over 25 years at the U.S. Census Bureau. Currently she is the Associate Director for Demographic Programs. The Demographic Programs Directorate provides relevant and accurate information on the size, distribution and characteristics of the nation's population, income and poverty, and housing. Demographic programs bridge the gap between censuses, providing information for policy decisions to promote the economic and social well-being of the United States. Additionally, the directorate is responsible for gathering international demographic data; providing survey and statistical services to other government agencies, such as survey design, data collection and data processing; maintaining strong partnerships with sponsors and stakeholders; and designing and marketing new products that meet national and international information needs.

Previously, Tori led several divisions at the core of the Census Bureau's mission. When Tori was Chief of the American Community Survey Office, she led the research effort to reduce respondent burden while maintaining the quality of the ACS. In previous positions, Tori directed the Census Bureau's research on homeownership rates, income, poverty and health insurance, new measures for same-sex relationships, and the development of the supplemental poverty measure. She also directed the research and outreach on race and Hispanic origin data, the production of population estimates and projections for the United States and other countries, and international assistance work. Tori holds a Ph.D. in Sociology and Demography from Princeton University, and an M.A. in Russian and East European Studies and a B.A. in Economics from the University of Michigan. She has received several Department of Commerce Bronze Medal Awards for her work.

Plans for 2020 Census Data Products

Presider: Jason Devine, U.S. Census Bureau

This informational session will provide information on plans for 2020 Census data products. The implementation of a new disclosure avoidance methodology, referred to as Differential Privacy, has increased interest in this topic because of the potential for reductions in the number and detail of 2020 Census tables that will be released, and concerns about the level of "noise" that may be infused into Census tabulations. Census Bureau staff will provide an overview of the disclosure avoidance methods that will be used and provide a status update on the data products plan for the 2020 Census.

Michael B. Hawes, Senior Advisor for Data Access and Privacy, U.S. Census Bureau

Jason Devine, Census Programs Area, Population Division, U.S. Census Bureau

SDA Plenary Speaker 2019

Mark J. VanLandingham, PhD, is the Thomas C. Keller Professor at Tulane University. His research focuses on a wide array of topics related to demography, sociology, and public health. He has led recent major projects focusing on the antecedents and consequences of largescale rural-to-urban migration within Southeast Asia; and acculturation, health, and well-being among Vietnamese immigrants in the United States. One major project underway investigates Health and Demographic Disparities in Long-term Recovery from Hurricane Katrina (HDDR-HK), funded by a Program Award (P01) from NIH. He co-leads this team of researchers from Tulane, Harvard, NYU, Brown, and Michigan with Mary Waters and David Abramson. An overview can be found here: [Science](#). This project is based at Tulane's new Center for Studies of Displaced Populations (CSDP), which he directs.

An enduring interest is community resilience within immigrant communities, and he has a recent book on this topic published by the Russell Sage Foundation: [Weathering Katrina](#) (2017). Regarding teaching, he co-leads (with Katherine Andrinopoulos) the International Health and Development (IHD) Section and Program within the Department of Global Community Health and Behavioral Sciences in Tulane's School of Public Health and Tropical Medicine. For teaching and student mentoring, Dr. VanLandingham has recently received the school's Teaching Excellence Award (2013) and the school's award for Outstanding Long-Term Commitment to Student Needs (2018). Mark holds a PhD in Sociology from Princeton University, an MPH in Population Planning and International Health from the University of Michigan, and a BA in Biology and Psychology from Mercer University.
